PURPOSE AND RATIONALE OF THE QUALIFICATION

Purpose:

The primary purpose of this qualification is to provide the required competencies in a learner for a career in the operation, installation and maintenance of specialist machinery to manufacture aluminium products.

Qualified learners will be competent to:

- > Operate specialist machinery used in the manufacturing of aluminium components and systems.
- > Work according to drawings, specifications and building standards relating to the manufacturing and installation of aluminium systems.
- > Perform a range of installations of aluminium systems.
- > Apply safety, health, environmental and quality procedures to installations.

This qualification will develop the competencies for learners to perform aluminium work in the construction industry. The qualification also provides the basis upon which further related learning and career development can take place. Learners are expected to benefit by enhanced career opportunities and earning potential that will also benefit the local community and the economy. Learners will acquire competencies which will form the basis on which further related learning and career development can take place.

The employment of competent Aluminium Work personnel inspires confidence to the industry and also help in the social development and economic transformation of society. High productivity, career development and personal job satisfaction of Aluminium Work construction personnel are facilitated through the learning process used to achieve the competencies specified.

Rationale:

Typical learners are manufacturing and installation personnel working in the aluminium sector of the construction industry. The aluminium industry is well established in South Africa and its success is dependent upon the efficient manufacturing and installing of aluminium products. Achievement of these objectives is largely dependent upon the competence, recognised by this qualification. An adequate number of people with these skills is needed to ensure that the production units in South Africa operate productively.

Competence in manufacturing and installing aluminium systems requires appropriate general, aluminium and glass specific technical and other knowledge and its application; and expertise in manufacturing and installing on a construction site. This knowledge and expertise can form a basis for further learning particularly in the manufacturing, installing and supervisory aspects of aluminium manufacturing and similar industries in the construction and other sectors.

The learners are expected to benefit by enhanced career opportunities and earning potential that will also

benefit the local community and the economy.

RECOGNIZE PREVIOUS LEARNING?

N

LEARNING ASSUMED TO BE IN PLACE

It is assumed that learners are already competent in the following:

- > Communication at NQF Level 1.
- > Mathematical Literacy at NQF Level 1.

Access to the qualification:

Access is open bearing in mind learning assumed to be in place.

QUALIFICATION RULES

It is compulsory for learners to complete all Fundamental and Core unit standards. Learners must select a minimum of 13 credits from the Electives to obtain this qualification.

This qualification is made up as follows:

- > Fundamentals: 36 credits.
- > Core: 105 credits.
- > Electives: A minimum of 13 credits.
- > Total: 154 credits.

EXIT LEVEL OUTCOMES

1. Use specialist machinery to manufacture aluminium components and systems.
2. Work according to drawings, specifications and building standards relating to the manufacturing and installation of aluminium systems.
3. Perform a range of installations of aluminium systems.
4. Apply safety, health, environmental and quality procedures to installations.

Critical Cross-Field Outcomes:

This qualification addresses the following Critical Cross-Field Outcomes. The way in which the Critical Cross-Field Outcomes are addressed is presented in detail in the unit standards outlined:

- > Identifying and solving problems in which responses display that responsible decisions using critical and creative thinking have been made.
- > Working effectively with others as a member of a team, group, organisation or community.
- > Organising and managing oneself and one's activities responsibly and effectively.
- > Collecting, analysing, organising and critically evaluating information.
- > Communicating effectively using visual, mathematical and or language skills in the modes of oral and or written persuasion.
- > Using science and technology effectively and critically, showing responsibility towards the environment and health of others.
- > Using Mathematics to perform a task.
- > Demonstrating an understanding of the world as a set of related systems by recognising that problem-solving contexts do not exist in isolation.

ASSOCIATED ASSESSMENT CRITERIA

1:

- > The correct handling, lifting, stacking, storage and transportation of aluminium materials is demonstrated without damage to the material.
- > The manufacturing procedures and limitations are interpreted and implemented in accordance with manufacturing and limitations procedures.
- > A range of aluminium components and systems are assembled according to specifications and industry standards.

2:

- > Relevant drawings and specifications are read and interpreted in relation to the manufacturing and installation of aluminium systems.
- > Building standards relating to material, safety and construction methods are interpreted in accordance with specifications requirements.

3:

- > A range of measurements is taken according to specifications.
- > A range of aluminium systems is installed in accordance with specifications and building standards.
- > Servicing of aluminium hardware is demonstrated with practical examples.
- > Good housekeeping skills are demonstrated as defined by workplace standards and norms.

4:

- > Quality Assurance checks are performed on a range of aluminium products and systems.
- > The use of Personal Protection Equipment is demonstrated and factory specific safety mechanisms are implemented in accordance with manufacturer's specifications.
- > Knowledge of safety considerations is demonstrated on a construction site.
- > Awareness of health and safety regulations is displayed pertaining to installation procedures.
- > Environmental protection standards are adhered to according to workplace standards and norms.

Integrated assessment:

The applied competence (practical, foundational and reflexive competencies) of this qualification will be achieved if a candidate is able to operate the equipment in an aluminium-manufacturing environment, maintain quality control practices, demonstrate knowledge of assembly and installation procedures and perform basic maintenance and servicing functions.

Appropriate methods and tools must be used to assess practical, foundational and reflexive competence of the learner in all the exit level outcomes listed above, as well as to determine a learner's ability to solve problems, work in a team, organise him/herself, use applied science, and understand the implications of actions and reactions in the world as a set of related systems. Such an assessment process will determine development of the whole person, and the integration of applied knowledge and skills.

Assessors should develop, conduct, and ensure integration of assessment by making use of a range of formative and summative assessment methods against the unit standards that make up the qualification. Combinations of applied, foundational and reflective competencies, including Critical Cross-Field Outcomes, should be assessed wherever possible.

Moderators should ensure that assessment is valid, consistent and integrated into work or learning, and that there is sufficient and authenticated evidence of learner competence against the whole qualification.

INTERNATIONAL COMPARABILITY

Most countries do not have one single Qualification that deals explicitly with 'Aluminium Work'. There are programmes, courses and qualifications in the manufacturing, construction and welding of aluminium but not with its handling and storage.

Countries which are recognised as leaders in aluminium include the United Kingdom, European Countries and the USA. This National Certificate qualification and set of unit standards utilises international and locally recognised best practice and standards in aluminium work as applied in those countries.

Comparisons were done with programmes in the following countries:

The United Kingdom:

Training in Aluminium Application Technologies (TELAT), (Accredited by the European Aluminium Association):

> Aluminium Materials Technology (AMT):

> The programme includes:

- > Production, Markets, Environment.
- > Aluminium Metallurgy.
- > Production and Properties of Semi-finished Products.
- > Advanced Aluminium Materials.
- > Aluminium Alloys; Properties and Selection Criteria.

- > Advanced Metallurgical and Material Science Topics.
- > Aluminium Design (AD):
 - > The programme includes:
 - > Aluminium in Product Development.
 - > Introduction to Structural Design.
 - > Static Design.
 - > Fatigue Design.
 - > Design for Fire Resistance.
 - > Design Examples.
- > Aluminium Machining and Forming (AMF):
 - > The programme includes:
 - > Machining of Wrought and Cast Aluminium Product.
 - > Aluminium Casting Technology.
 - > Fundamentals of Metal Forming.
 - > Forging of Aluminium.
 - > Impact Extrusion of Aluminium.
 - > Forming Aluminium Sheet Metal Parts.
 - > Superplastic Forming of Aluminium Sheet.
- > Aluminium Joining Technology (AJT):
 - > The programme includes:
 - > Mechanical Fastening Methods.
 - > Arc Welding of Aluminium and Aluminium Alloys.
 - > Beam Welding Processes of Aluminium.
 - > Resistance Welding.
 - > Brazing, Soldering and Other Bending Methods.
 - > Adhesive Bonding of Aluminium.

Science, Engineering, Manufacturing Technologies Alliance (SEMTA), (This is the Sector Skills Council for Science, Engineering and Manufacturing Technologies):

Northland Community and Technical College:

- > Manufacturing Training:
 - > The programme includes:
 - > Basic Machine operations.
 - > Production Management.
 - > Robotics/Robotic Welding.
 - > Aluminium and Steel Welding.
 - > LEAN Manufacturing.
 - > Continuous Improvement.
 - > Quality Control.
 - > Customised Employee Training.

Alcotec Welding School - Michigan:

- > Specialised Training and Qualification in Aluminium Welding:
 - > The programme includes:
 - > Welding Equipment Evaluation.
 - > Metal Preparation Methods.
 - > Welding Procedure Development.
 - > Weld Discontinuities.
 - > Alloy and Temper designation System.
 - > Welding Metallurgy.
 - > Filler Alloy Selection.
 - > Welding Codes and Standards.

New Zealand:

> NZQF - National Certificate in Joinery (Aluminium Fabrication):

> The programme includes:

> A level 3 qualification with accredit total of 96 credits, which allows the learner to choose Elective unit standards in domains that are comparable to what is required in this qualification:

- > Health Studies - 2 unit standards.
- > Joinery Machining - 1 unit standard.
- > Stairs and Other Joinery - 2 unit standards.
- > Architectural Aluminium Joinery - 10 unit standards.
- > Core Construction - 8 unit standards.
- > Decorating - 1 unit standard.

Australia:

> Certificate III in Off Site Construction (Joinery-Timber/Aluminium/Glass):

This qualification contains certain elements that may act as reference points for this qualification, although the focus is not altogether on aluminium and glass.

A comparison of the above qualifications was undertaken and the best practice points were highlighted and used in the generation of this qualification.

Conclusion:

In general this qualification and its component unit standards compare well with the training that is offered internationally. The major differences are in formatting and scope of coverage or focus.

ARTICULATION OPTIONS

Horizontal articulation is possible with:

- > 49410: National Certificate: Construction, NQF Level 2.
- > 24198: National Certificate: Construction Material Manufacturing, NQF Level 2.
- > 49022: National Certificate: Floor Covering Installation, NQF Level 2.

Vertical articulation is possible with:

- > 22671: National Certificate: Construction Masonry, NQF Level 3. (This qualification has expired and will be replaced shortly).
- > 24194: National Certificate: Construction Material Manufacturing, NQF Level 4.
- > 49053: National Certificate: Supervision of Construction Processes, NQF Level 4.

MODERATION OPTIONS

- > Anyone assessing a learner or moderating the assessment of a learner against this Qualification must be registered as an assessor with the relevant Education, Training, Quality, Assurance (ETQA), or with an ETQA that has a Memorandum of Understanding with the relevant ETQA.
- > Any institution offering learning that will enable the achievement of this Qualification must be accredited as a provider with the relevant Education, Training, Quality, Assurance (ETQA) or with an ETQA that has a Memorandum of Understanding with the relevant ETQA.
- > Assessment and moderation of assessment will be overseen by the relevant Education, Training, Quality, Assurance (ETQA), or by an ETQA that has a Memorandum of Understanding with the relevant ETQA, according to the ETQA policies and guidelines for assessment and moderation.
- > Moderation must include both internal and external moderation of assessments at exit points of the Qualification, unless ETQA policies specify otherwise. Moderation should also encompass achievement of the competence described both in individual Unit Standards as well as the integrated competence described in the Qualification.
- > Anyone wishing to be assessed against this Qualification may apply to be assessed by any assessment agency, assessor or provider institution that is accredited by the ETQA.

CRITERIA FOR THE REGISTRATION OF ASSESSORS

Assessors and moderators wishing to assess candidates against this qualification must be registered as assessors with the relevant ETQA or with an ETQA that has a Memorandum of Understanding with the relevant ETQA.

NOTES

Range of equipment covered:

- > A system is understood to be equipment operated in combination to achieve a desired result in process operation.
- > Operating a system includes the integrated operation of the equipment that makes up the system.

Range statements:

- > This qualification addresses the use and maintenance of specialist machinery to manufacture aluminium components and systems, the installation of a range of aluminium systems and the glasswork for aluminium systems.
- > Technology relating to aluminium work includes communication, mathematics, applied science, and industry specific technology and information technology.
- > This qualification may be applicable to other manufacturing and installation operations. This is subject to its acceptance by appropriate subject matter experts.
