Methodological Guidelines for Quantification of Greenhouse Gas Emissions – Carbon Sequestration in the Forestry Industry

Chapter A: Introduction and background	1
A.1. Introduction	1
A.2. System boundary	3
A.3. Legislative Framework	3
A.3.1. National Greenhouse Gas Emissions Reporting Regulations	3
A.3.2. The Carbon Tax Act 2019	4
A.4. Existing forest industry frameworks	8
A.5. Defining the Variable “S” and system boundaries	9
A.6. Principles of a Robust GHG Accounting System	11
A.7. Challenges faced when implementing carbon accounting system at the company level	14
A.7.1. Eligibility and liability	14
A.7.2. Reporting of 3 rd party emissions/removals by accounting entity	16
A.7.3. HWP accounting	16
A.7.3.1. C stock and Emissions from HWPs	17
A.7.3.2. How should HWP decay be accounted?	18
A.8. Reporting of fertilisers and fires	22
A.8.1. Fertilisers	22
A.8.2. Fires	23
A.9. Accounting frameworks	23
A.9.1. Justification for the Use of Annual Gross-net Accounting	24
A.10. Reporting and verification	25
A.10.1. Sequestration submission process	25
A.10.2. Reporting	26
A.10.3. Verification	27
A.10.4. Reducing the reporting burden	28
A.11. Future considerations	28
A.11.1. Net-net Accounting Frameworks	28
A.11.2. Current Forest Carbon Modelling Capacity	29
A.11.3. Forward looking baseline (net-net) rules	30
A.11.4. Accounting of natural disturbances	31
A.12. References	36
Chapter B: Accounting Rulebook	39
B.1. Introduction	39
B.1.1. Definition of S	40
B.1.2. HWP accounting	40
B.2. Emission pools or sources included under the various forest activities	41
